

Project name	Reconstruction and rehabilitation of the sports pool Prekounje
Sector	Sports
Location	Bihać
Location description	<p>The city of Bihać is located in the northwestern part of Bosnia and Herzegovina, on the border with the EU and has an extremely favorable geographical position with access to a market with over 600 million inhabitants:</p> <ul style="list-style-type: none"> – Zagreb, Croatia 150 km – Banja Luka, BiH 155 km – Rijeka, Croatia 170 km – Ljubljana, Slovenia 230 km – Koper, Slovenia 275 km – Sarajevo, BiH 311 km – Budapest, Hungary 500 km – Vienna, Austria 500 km.
Project status	<p>The devastated facility is the property of the City, and from the documentation there is an urban consent for the reconstruction and rehabilitation of the sports pool with some changes. With the construction of the pool, we would get the first pool at the USC, which would have the characteristics of holding swimming competitions, water sports, but also educational character, starting from</p>

	swimming school and physical education for both primary and middle ages and for students. Of course, the pool would also be used for recreation of citizens.
Project background	In the northwestern part of BiH, there is not a single sports pool that aims to develop sports disciplines and that satisfies any competition. A swimming pool was built in Bihać in the settlement of Prekounje, which first had a balloon, which burst in the 1980-s, and then a steel structure was installed, but it has never worked since.
Project description	<p>A swimming pool would be built on the existing location, where the existing construction and part of the concrete building would be used. Two swimming pools would be built, one for sports activities 25 meters long and 12 meters wide, because these are the smallest dimensions for the training process and the organization of the competition. The second pool would be a stepped depth that would serve for beginners, ie. for learning to swim. During the construction, building materials that are environmentally friendly would be used, and for the construction of the machine part for heating and ventilation, technical solutions would be used with the installation of solar panels as a renewable energy source, and heating boilers would be installed on pellets.</p> <p>Target group: Primarily primary school children, secondary school youth and students of certain faculties due to the fact that it will be possible to organize swimming lessons in their physical education units. The second group are athletes of all ages, primarily those of water sports, who will receive a facility for training and competition. The third group are citizens who will have another sports facility for recreation, that is. swimming. Of course, the fourth group are all those others who come to our region to stay, where they will have the opportunity to organize swimming, as part of the tourist offer.</p>
Estimated total value of investment in EUR	1,278,229.70
Form of cooperation with a partner	Cooperation with the City of Bihać and the Ministry of Education, Science, Culture and Sports of the USC Possible model of cooperation: Public-private partnership
